

## French Economy: what policies to reduce unemployment and foster competitiveness?

Eric Heyer @HeyerEric

**Franco-German Conference** 

Paris 7-8 July 2016

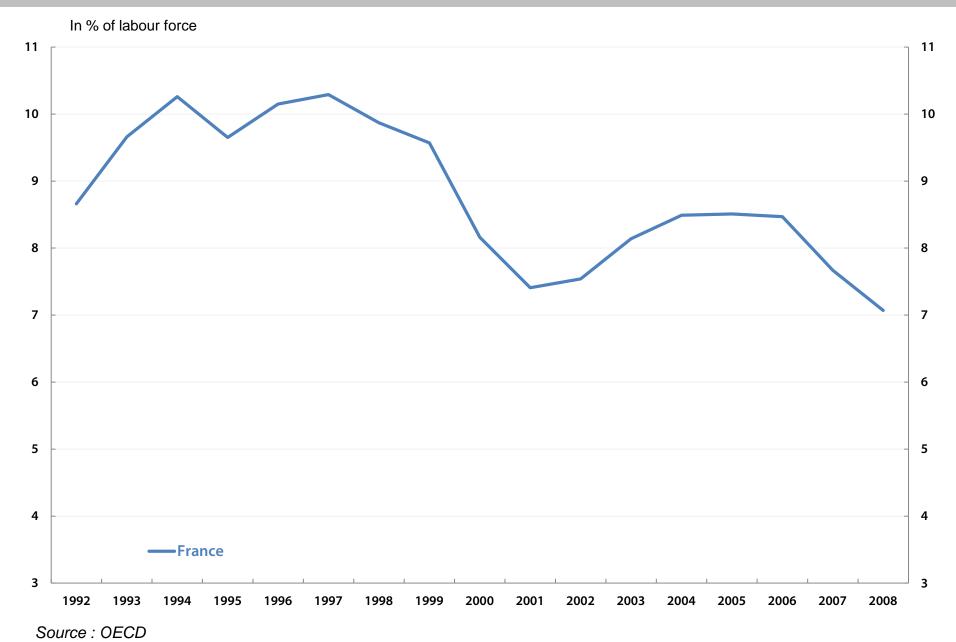

## In this presentation I'd like to cover three points :

- A comparison of the situation on the labour market in the main developed countries: the stylized fact
- □ How to boost French economic growth ?
  - On the Demand side
  - On the Supply side
- □ What are the optimal conditions to implement structural reforms ?
  - Return to established and widespread views about the reasons of french unemployment

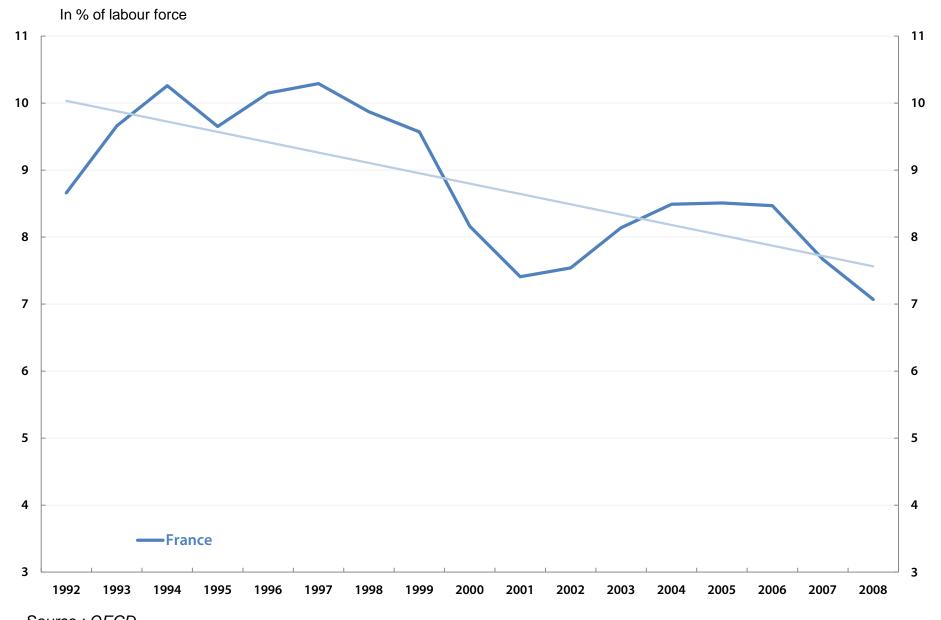

## The situation on the labour market : the stylized fact

observatoire français des conjonctures économiques centre de recherche en économie de Sciences Po www.ofce.sciences-po.fr

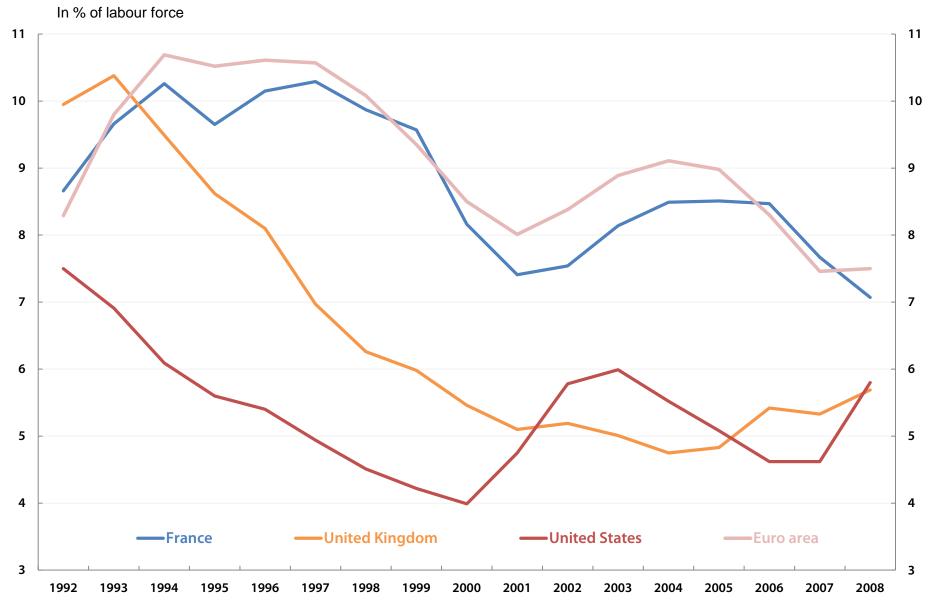

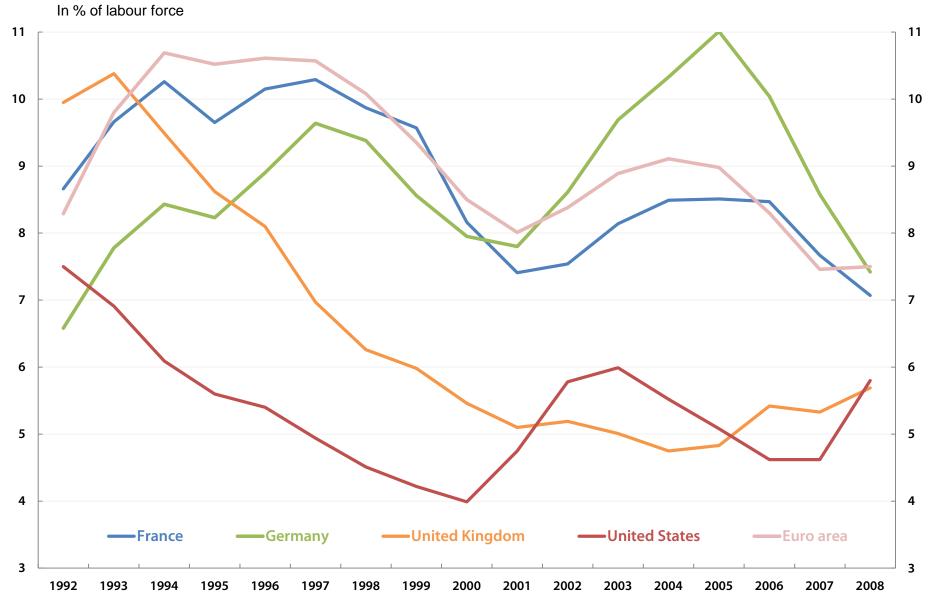

Source : OECD

Source : OECD

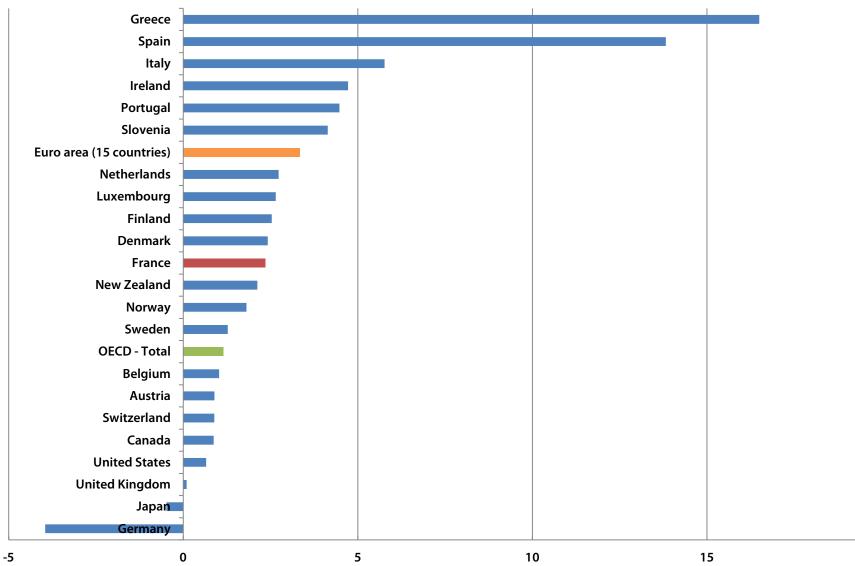

Source : OECD

#### Variation of the unemployment rate between 2008 and 2015

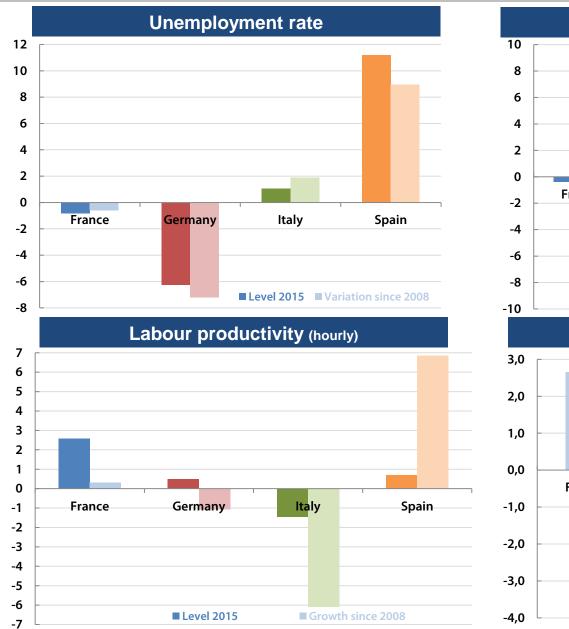

In % of labour force

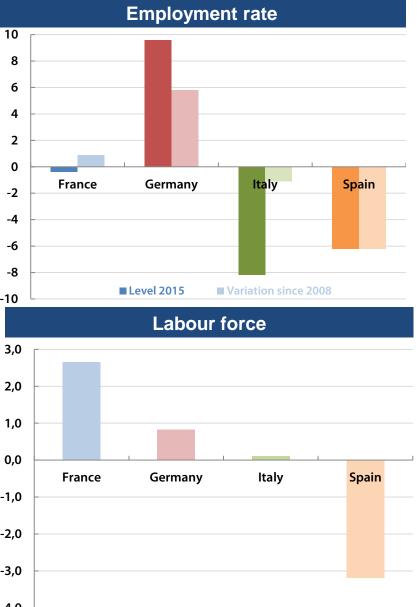

The increase in France is far from being the most significant: it is less than that observed on average in the euro zone

20

#### The situation of the labour market : comparison with that in the euro area as a whole

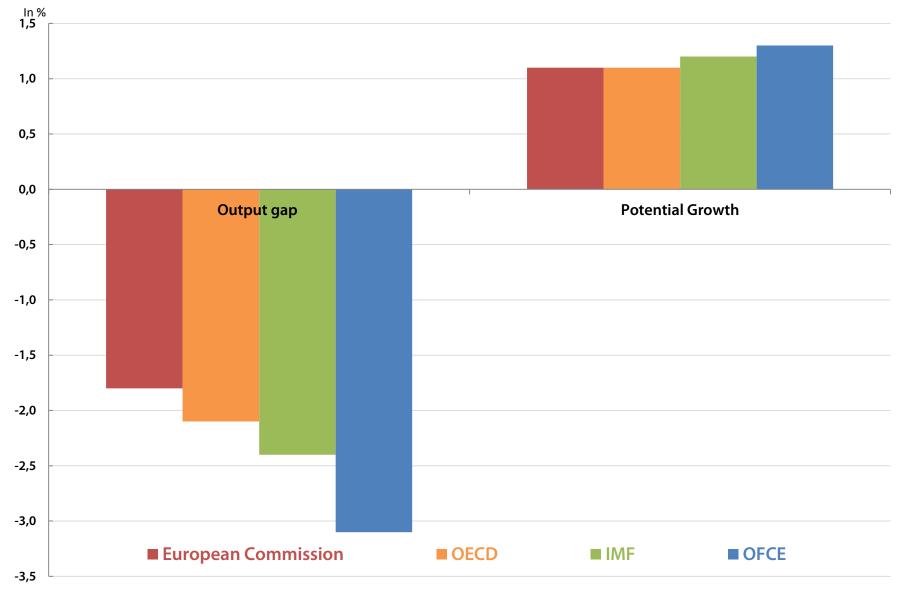

@HeyerEric Source : Eurostat Note : In dark color, you have the level in 2015. In light color, you have the growth rate since 2008

#### A strongly negative output gap in 2015 for french economy

If there is a consensus around the fact that the economic crisis could have an impact on both the level and growth of potential production, a consensus opinion exists around the idea on a potential rebound of French economy.

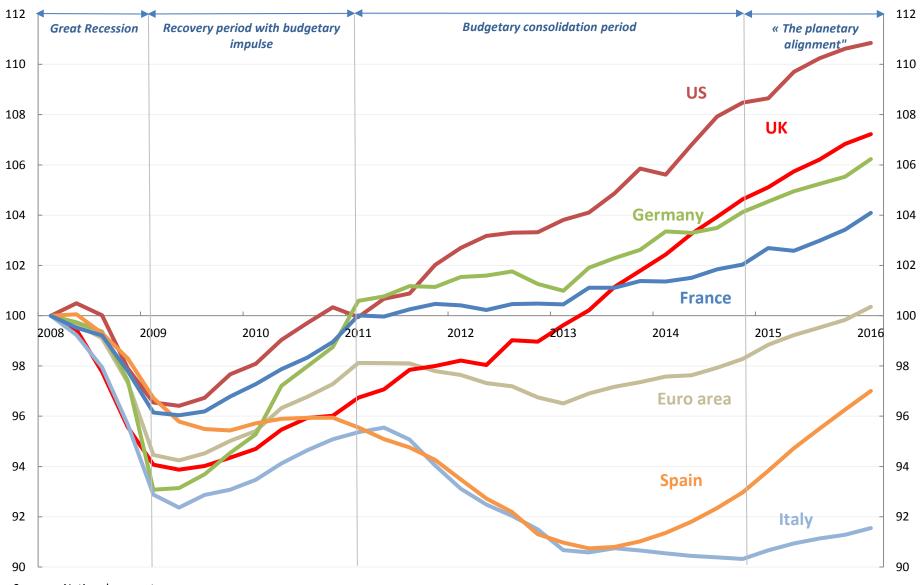

## How to boost French economic growth?

observatoire français des conjonctures économiques centre de recherche en économie de Sciences Po www.ofce.sciences-po.fr

#### **Evolution of GDP since the crisis: an international comparison**

2008 = 100

| indirect effect through foreign trade | 0.0  | 0.0  | -0.2 | -0.1 | 0.0  | 0.0  | 0.0  | 0.0  |
| fiscal stance                         | -0.2 | -0.6 | -1.1 | -1.5 | -1.0 | -0.8 | -0.4 | -0.5 |
| direct effect on the national economy | -0.2 | -0.4 | -0.4 | -1.0 | -0.8 | -0.5 | -0.4 | -0.4 |
| indirect effect through foreign trade | 0.0  | -0.2 | -0.7 | -0.5 | -0.2 | -0.3 | 0.0  | -0.1 |
| chinese economic slowdown             | 0.0  | 0.0  | 0.0  | 0.0  | -0.1 | -0.3 | -0.3 | -0.2 |
| direct effect on the national economy | 0.0  | 0.0  | 0.0  | 0.0  | -0.1 | -0.2 | -0.2 | -0.1 |
| indirect effect through foreign trade | 0.0  | 0.0  | 0.0  | 0.0  | -0.1 | -0.1 | -0.1 | -0.1 |
| Carry over                            | 0.5  | 0.7  | 0.0  | -0.1 | -0.1 | -0.1 | 0.1  | 0.5  |
| Internal shocks (real estate market)  |      |      |      |      | -0.1 | -0.2 | 0.0  | 0.0  |
| Sum of shocks impact                  | 0.4  | 0.2  | -1.7 | -1.6 | -1.0 | -0.6 | 0.0  | 0.0  |
| Spontaneous growth (without shocks)   | 1.4  | 1.9  | 1.9  | 2.2  | 1.7  | 1.7  | 1.6  | 1.6  |

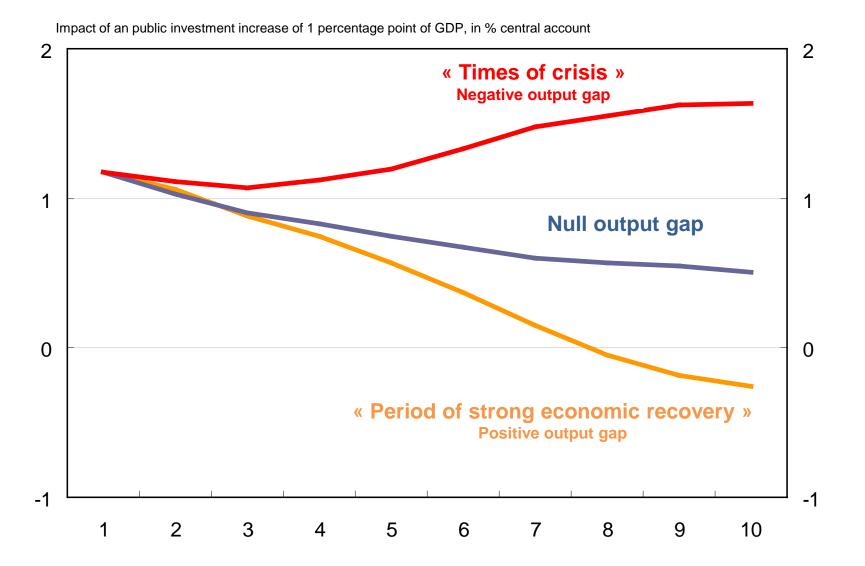

It is clear from our analysis that the combination of these shocks explains a large part of the slowdown from 2011 to 2014. The impact is on average close to 1.5 point of GDP per year for this three years

Most of this impact is due to the fiscal policy

Sources : INSEE, OFCE calculations

#### Fiscal multiplier depends on the economic cycle : higher in "times of crisis" than in a period of strong economic recovery

Source : Jérôme CREEL, Eric HEYER et Mathieu PLANE (2011), « Petits précis de politique budgétaire par tous temps : les multiplicateurs budgétaires au cours du cycle», *Revue de l'OFCE*, n°116, january.

| Spontaneous growth (without shocks)   | 1.4  | 1.9  | 1.9  | 2.2  | 1.7  | 1.7  | 1.6  | 1.6  |

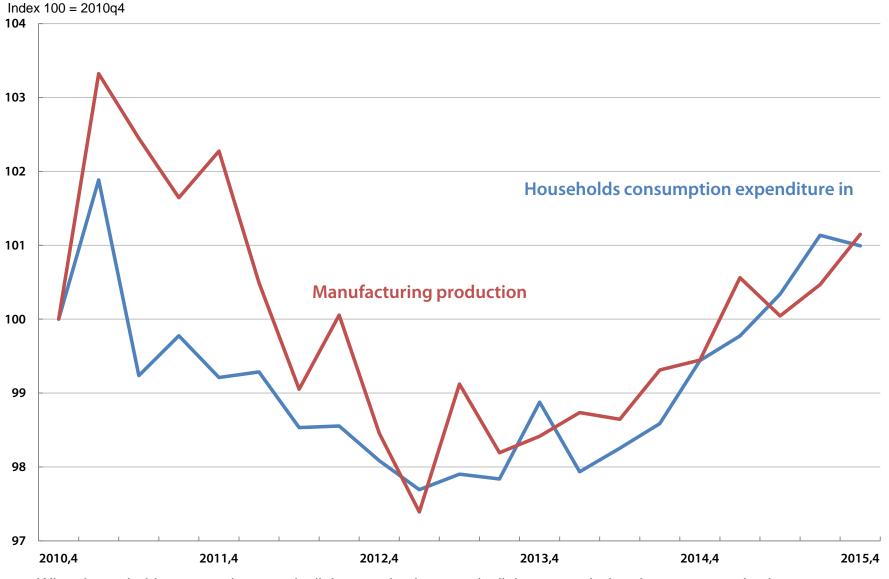

Moreover, we find that when these shocks decline, growth accelerate.

Sources : INSEE, OFCE calculations

#### The link between consumption and production is always a reality today in France :

French industrial firms were able to respond to a consumption surplus

When household consumption was declining, production was declining too and when it restarts, production starts again (and not only imports).

# What are the optimal conditions to implement structural reforms?

#### the unemployment benefit system : is it too generous ?

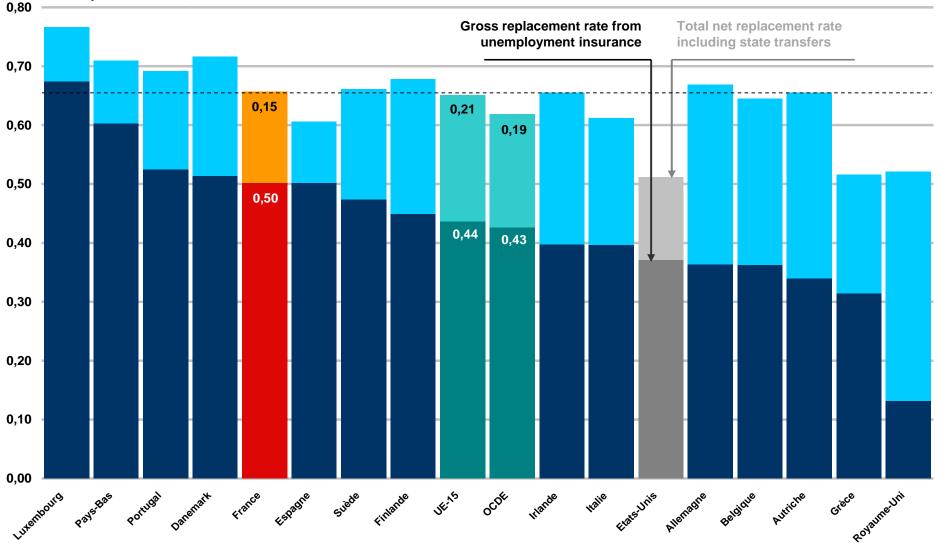

Scarpetta (1996), Nickell (1998), Elmeskov et alli (1998), Nunziata (2002), Bassanini et Duval (2006)

#### Net replacement rate of unemployed receiving benefits

Unemployment benefits and other state transfers

Net replacement rate, in %

If you include the state transfers, the French system is not more generous with the unemployed than elsewhere in others developped countries

#### Return on established and widespread views about the reasons of french unemployment

#### the unemployment benefit system : is it too generous ?

Scarpetta (1996), Nickell (1998), Elmeskov et alli (1998), Nunziata (2002), Bassanini et Duval (2006)

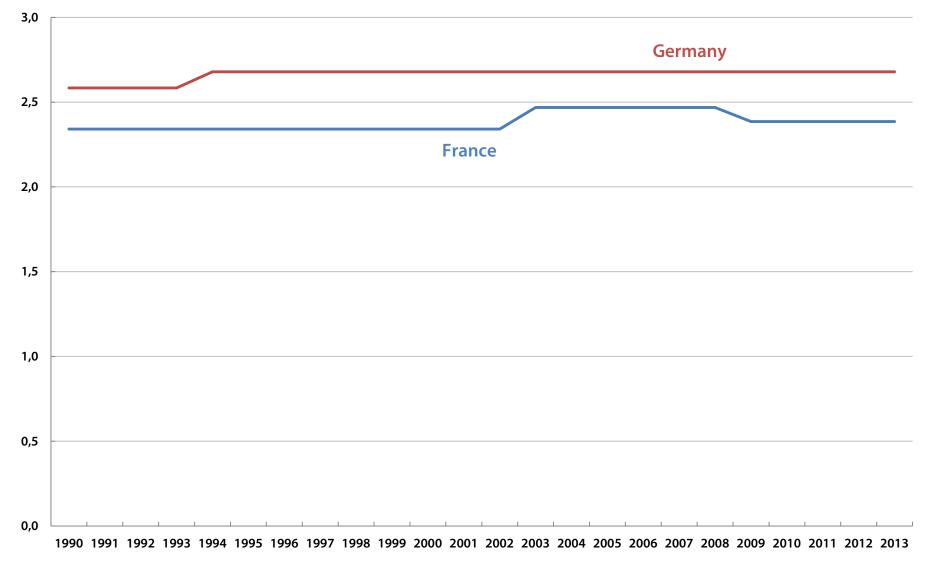

#### the employment protection legislation : is it too strict ?

Bentolila et Bertola (1990)

#### **Strictness of employment protection legislation : regular employment**

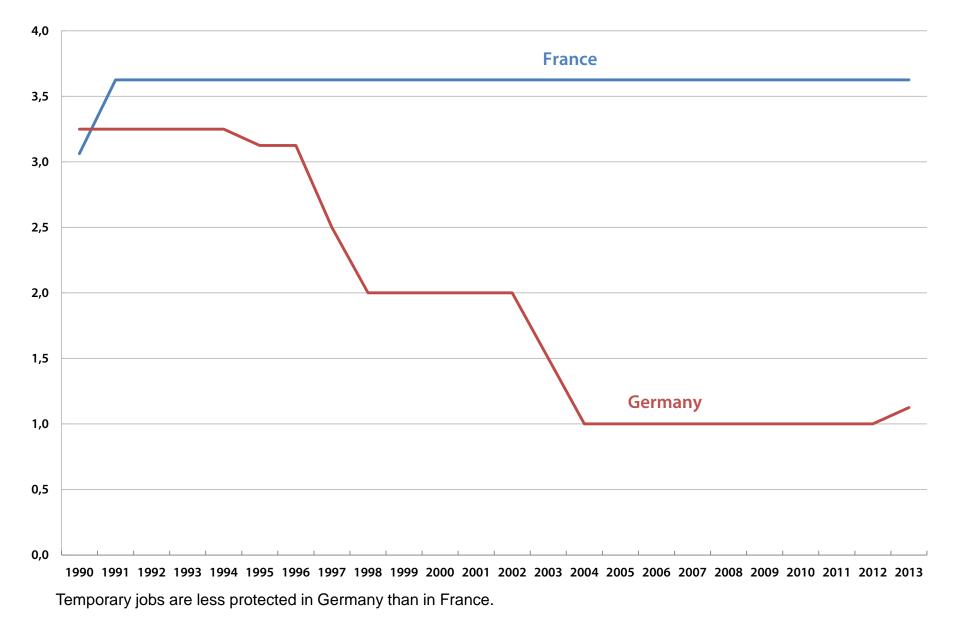

Concerning legislation on employment, according to the OECD indicators, French law would be less protective than the German for permanent jobs.

@HeyerEric Source : OECD

#### **Strictness of employment protection legislation : temporary employment**

#### Return on established and widespread views about the reasons of french unemployment

the unemployment benefit system : is it too generous ?
Scarpetta (1996), Nickell (1998), Elmeskov et alli (1998), Nunziata (2002), Bassanini et Duval (2006)

the employment protection legislation : is it too strict ? Bentolila et Bertola (1990)

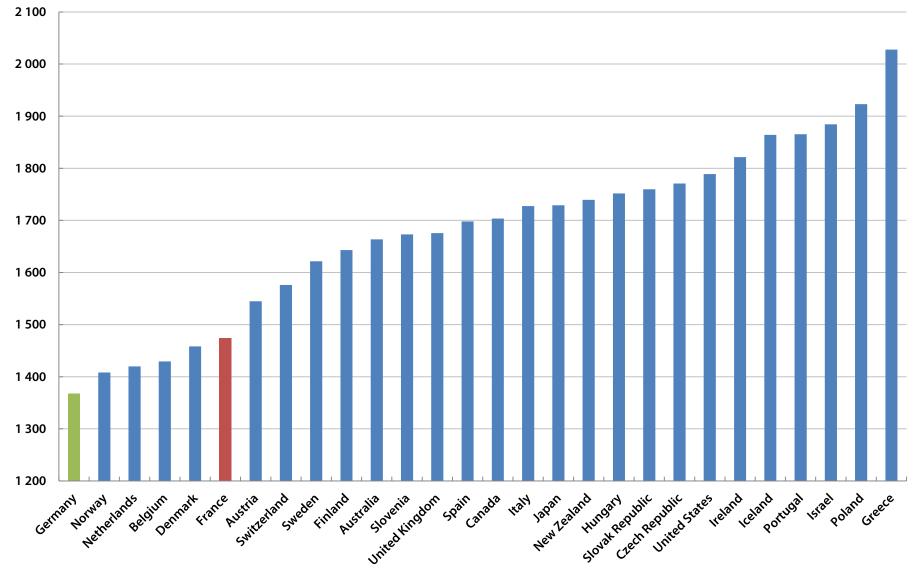

#### the working time : is it too weak ?

Brechling (1965), Heyer et Timbeau (2000), Chemin and Wasmer (2009), Heyer (2011)

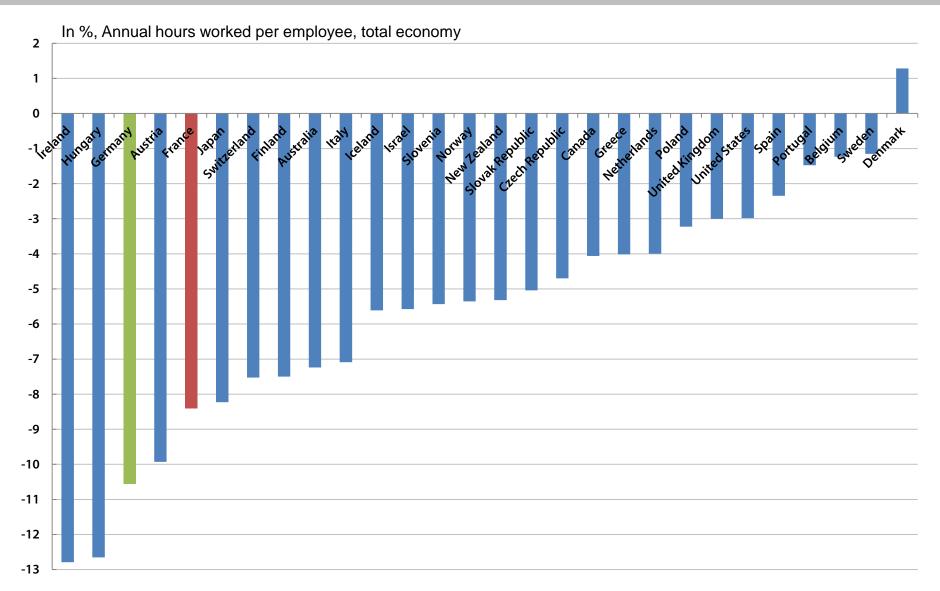

#### Annual hours worked per employee, total economy, 2014

In 2014, working time in France is not very high compares with the others developed countries. But it is higher than in Germany or the Netherlands and the Scandinavian countries.

#### Change in working hours since 1995 : All developed countries have reduced their working hours

All developed countries have reduced their working time in 20 years (with the exception of Denmark). This reduction was greater in Germany than in France, due to a stronger use of part-time work and especially a short-hour part-time work.

#### The impact of change in working time depends on the economy's position in the cycle when the measure is implemented

| Increase in the work week of | f:              | 0.8% | 1%   | 2.5% |
|------------------------------|-----------------|------|------|------|
|                              | Bottom of cycle | 0.1  | 0.1  | 0.3  |
| GDP                          | Normal cycle    | 0.2  | 0.2  | 0.5  |
|                              | Top of cycle    | 0.4  | 0.4  | 1.1  |
|                              | Bottom of cycle | -72  | -90  | -224 |
| Employment ('000s)           | Normal cycle    | -56  | -70  | -175 |
|                              | Top of cycle    | 13   | 17   | 41   |
|                              | Bottom of cycle | 0.3  | 0.3  | 0.8  |
| Unemployment rate            | Normal cycle    | 0.2  | 0.3  | 0.6  |
|                              | Top of cycle    | -0.1 | -0.1 | -0.2 |
|                              | Bottom of cycle | -0.4 | -0.5 | -1.3 |
| Gov't deficit(% of GDP)      | Normal cycle    | -0.4 | -0.5 | -1.2 |
| . ,                          | Top of cycle    | -0.2 | -0.3 | -0.8 |

**Table 5:** Summary of the impact at 5 years based on the increase in the work week (difference from the central account, %)

*Source* : Eric Heyer (2011), « The effectiveness of economic policy and position in the cycle : the case of taxe reductions on overtime in France », *Oxford Review of Economic Policy*, vol. 27, n° 2, summer.

When the economy is at the top of the cycle, increased working time is more appropriate than a decrease; However, in a time of crisis, a reduction in working time is better for economic growth and for employment.

#### Return on established and widespread views about the reasons of french unemployment

the unemployment benefit system : is it too generous ?
Scarpetta (1996), Nickell (1998), Elmeskov et alli (1998), Nunziata (2002), Bassanini et Duval (2006)

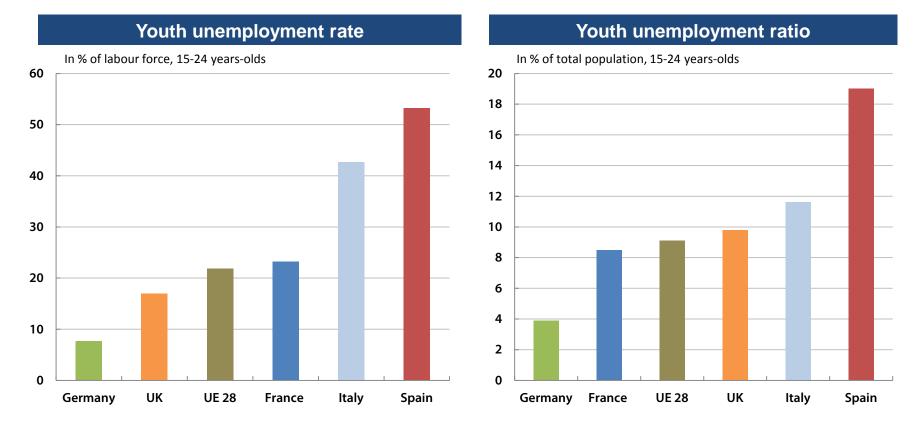

the employment protection legislation : is it too strict ? Bentolila et Bertola (1990)

the working time : is it too weak ?

Brechling (1965), Heyer et Timbeau (2000), Chemin and Wasmer (2009), Heyer (2011)

the youth unemployment rate : is it the highest ?

#### The youth unemployment : the ratio is more appropriate than the rate !

Source : OCDE

Note : The youth unemployment ratio is the share of unemployed youth in the total youth population

The difference is the denominator : in the rate is the labor force; the ratio is the total population. Labour force is not representative of youth in France because two-thirds of French young people are outside the labor force.

When you are looking at the ratio, the proportion of young people unemployed in France is on the average European Union countries, even slightly lower than in the UK.

#### Return on established and widespread views about the reasons of french unemployment

the unemployment benefit system : is it too generous ? Scarpetta (1996), Nickell (1998), Elmeskov et alli (1998), Nunziata (2002), Bassanini et Duval (2006)

the employment protection legislation : is it too strict ? Bentolila et Bertola (1990)

the working time : is it too weak ?

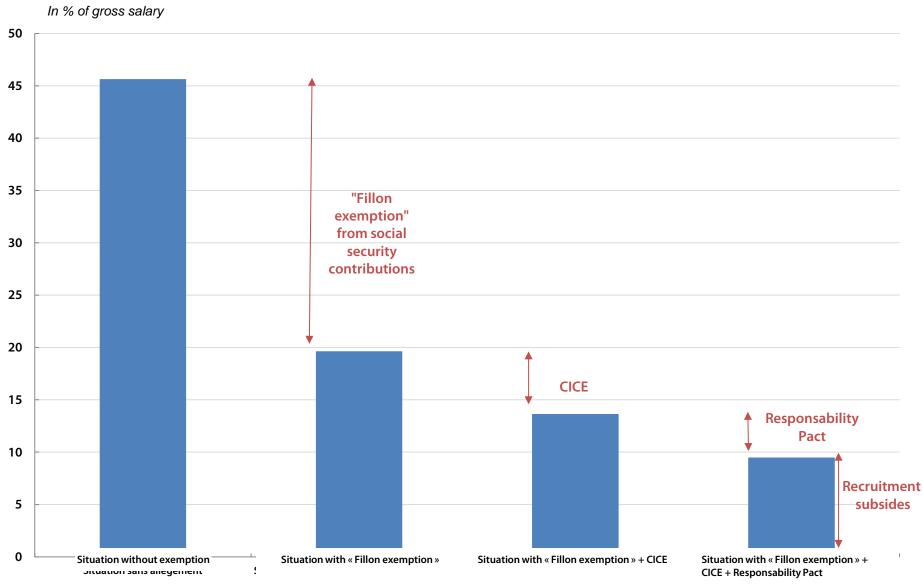

Brechling (1965), Heyer et Timbeau (2000), Chemin and Wasmer (2009), Heyer (2011)

the youth unemployment rate : is it the highest ?

the minimum wage : is it too expensive ?
Card et Krueger (1995), Dolado et alii (1996), Elmeskov et alii (1998), Neumark et Washcer (1999)

#### Rate of employer contributions at the minimum wage : there are many exemptions

When you take into account all the exemptions, it no longer exists any employer contributions at the minimum wage French minimum wage employees are cheaper than the Polish plumber

#### Public finances in Germany between 2002-2006 : we can not tighten all at once

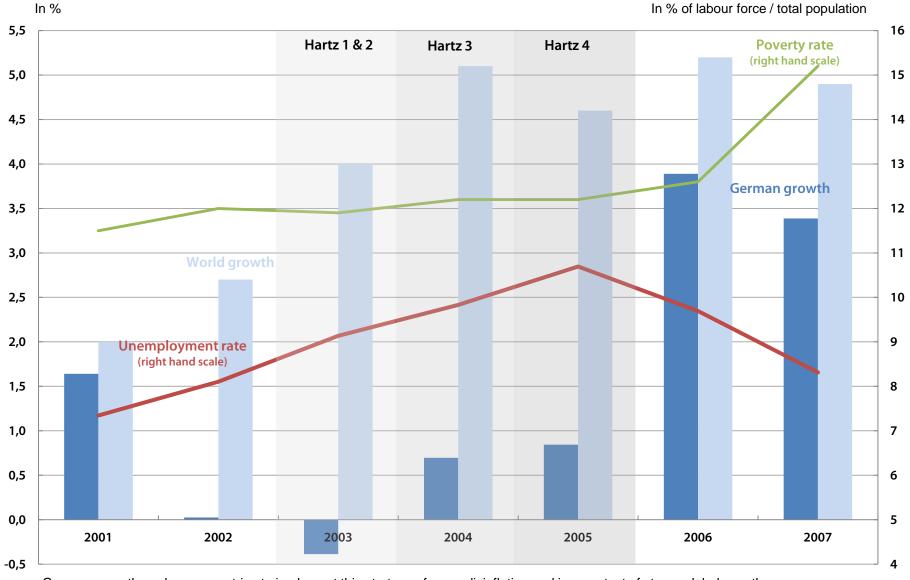

2 70 Hartz 4 Hartz 1 & 2 Hartz 3 **Public Debt** (right hand scale) 68 1 0.2 0 66 2002 2003 2004 2005 2007 2001 2006 -1 64 -1.7 -2 62 -3.1 -3 60 -3.3 **Maastricht criteria** -3.8 -3.9 -4.1 -4 58 **Public balance** -5 56

When the Germans introduced the Hartz reforms, they decided, at the same time, to let slip their public deficits and public debt beyond the Maastricht criteria

En % du PIB

#### Economic growth, Unemployment rate, poverty rate and external environment in Germany

Germany was the only one countries to implement this strategy of wage disinflation and in a context of strong global growth. Despite the extremely favorable context, it should be noted that reforms have been slow to allow the return of growth and unemployment decline (about 4 years).

#### @HeyerEric Sources : OCDE, OFCE calculations

#### Conclusion

- The conditions today are not the same :
  - □ We lead this strategy all at once...
  - □ ... in a context of weak global growth...
  - □ ... and trying to reduce public deficits

It is likely that the results will not be as good as those of the germans
